

Lab 02: Create a website for JavaJam Coffee House using HTML

Background of JavaJam Coffee House:

JavaJam Coffee House is a gourmet coffee shop that serves snacks, coffee, tea, and soft drinks. Local folk music performances and poetry readings are held a few nights during the week. The owner of the JavaJam Coffee House would like a web developer to create a website to display his services and provide a calendar for the performances.

A site map of the JavaJam Coffee House is shown in Figure 1. The site map describes the architecture of the website, which consists of a “Home” page with three main content pages: “Menu”, “Music”, and “Jobs”.

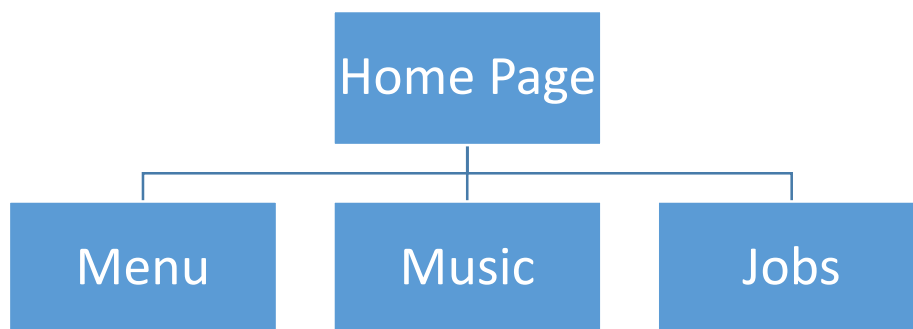

Figure 1: JavaJam site map

Task 1: Create a folder

Create a folder on your hard drive or portable storage device (USB or SD card) called “javajam” to contain your JavaJam website files.

Task 2: The Home Page.

You will use a text editor to create the Home page for the JavaJam Coffee House website. The Home page is shown in Figure 2.

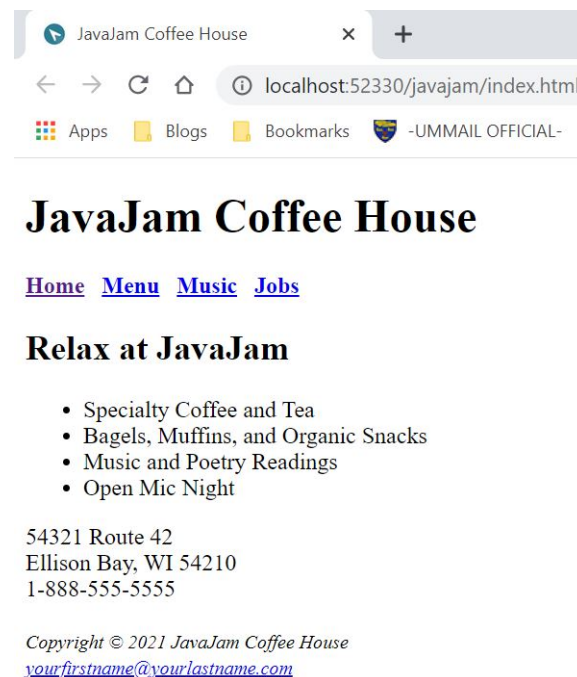

Figure 2 JavaJam index.html

Launch a text editor, and create a web page with the following specifications:

1. Name the page as “index.html” and save it in the “javajam” folder.
2. HTML Head - Web Page Title
 - a. Type a page title for the new page using <title> and </title> tags. Use a descriptive page title. The company name is a good choice for a business website.
3. HTML Body - Wireframe Header
 - a. Configure the main content within a <header> element.
 - b. Use <h1> for the JavaJam Coffeee House logo.
4. HTML Body - Wireframe Navigation

- a. place the navigation links (Home Menu Music Jobs) within a **<nav>** element. Using code **anchor tags** to create the hyperlinks and add extra blank spaces between the hyperlinks with the ** ** special character.

- “Home” links to index.html
- “Menu” links to menu.html
- “Music” links to music.html
- “Jobs” links to jobs.html

5. HTML Body - Wireframe Main Content.

- a. Configure the main content within a **<main>** element.
- b. Use **<h2>** to add a heading: “Relax at JavaJam”
- c. Configure the following content in a **unordered list**:
 - Specialty Coffee and Tea
 - Bagels, Muffins, and Organic Snacks
 - Music and Poetry Readings
 - Open Mic Night
- d. Code the following address and phone number contact information within a **<div>** element. Use **line break tags** to help you configure this area and add extra space between the phone number and the footer area.

54321 Route 42

Ellison Bay, WI 54210

1-888-555-5555

6. HTML Body - Wireframe Footer.

- a. Configure the following copyright and email link information within a **<footer>** element. Format it with small text size and italics font style.

Task 3: The Menu page

Create the Menu page shown in Figure 3. A technique that improves productivity is to create new pages based on existing pages so that you can benefit from your previous work. Your new Menu page will use index.html page as a starting point.

Open the **index.html** page for the JavaJam website in a text editor. Select File > Save As, and save the file with the new name of “**menu.html**” in the javajam folder. Now you are ready to edit the page.

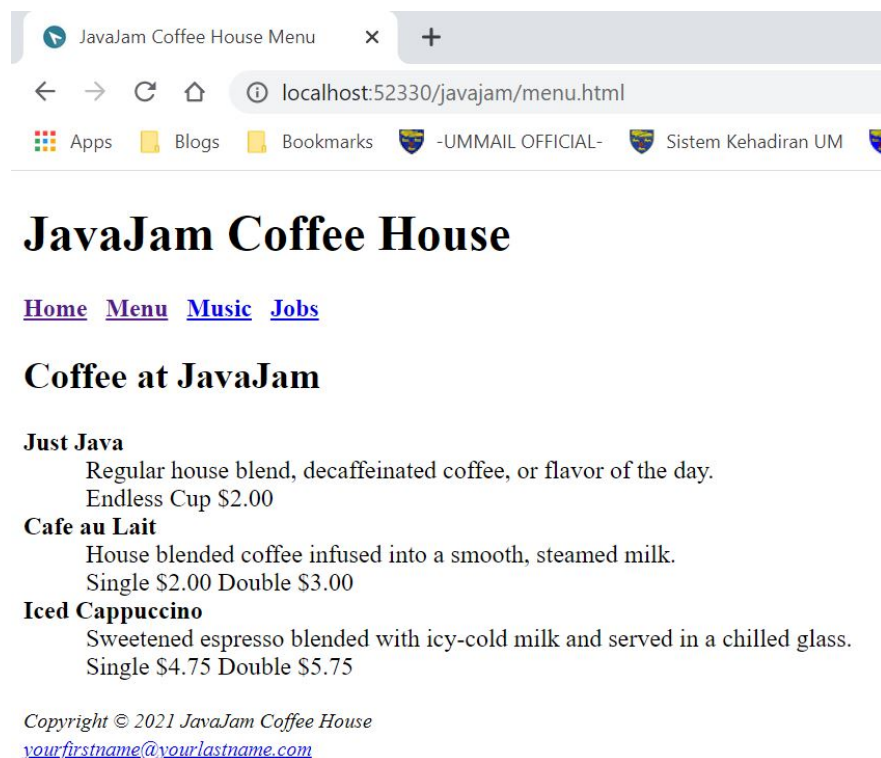

Figure 3 JavaJam menu.html

1. HTML Head - Web Page Title
 - a. Modify the page title for the new page using <title> and </title> tags to the following: JavaJam House Menu
2. HTML Body - Wireframe Main Content
 - a. Modify <h2> to “Coffee at JavaJam”
 - b. Delete the Home page content unordered list and contact information.
 - c. Use **description list** to add the menu content to the page. Use the <dt> tag to contain each menu item name. Configure the menu name to have strong

important and display in bold font weight with the `` tag. Use the `<dd>` tag to contain the menu item description. The menu item names and descriptions are as follows:

Just Java

Regular house blend, decaffeinated coffee, or flavor of the day.

Endless Cup \$2.00

Cafe au Lait

House blended coffee infused into a smooth, steamed milk.

Single \$2.00 Double \$3.00

Iced Cappuccino

Sweetened espresso blended with icy-cold milk and served in a chilled glass.

Single \$4.75 Double \$5.75

3. Test the hyperlink from the menu.html page to index.html. Test the hyperlink from the index.html page to menu.html. If you links do not work, review your work, paying close attention to these details:
 - Verify that you saved the pages with the correct names in the correct folder.
 - Verify your spelling of the page names in the anchor tags.

Test again after you make changes.

Task 4: The Music page

Create the Music page shown in Figure 4.

Open the **index.html** page for the JavaJam website in a text editor. Select File > Save As, and save the file with the new name of “**music.html**” in the javajam folder. Now you are ready to edit the page.

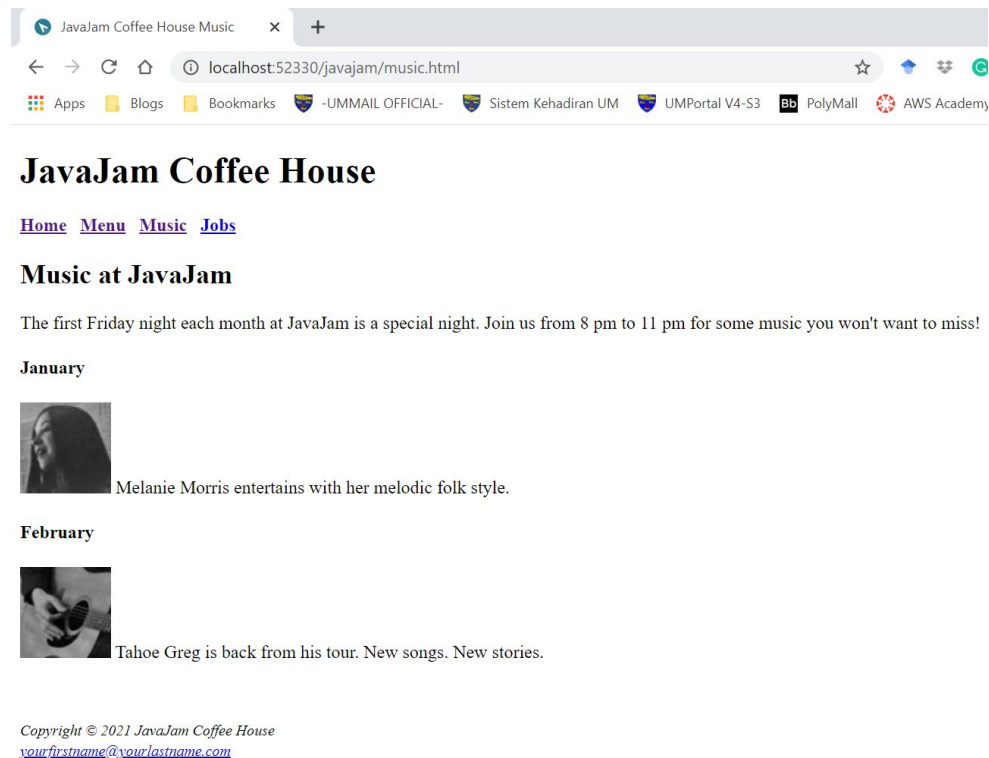

Figure 4 JavaJam music.html

1. HTML Head - Web Page Title
 - a. Modify the page title for the new page using <title> and </title> tags to the following: JavaJam House Music
2. HTML Body - Wireframe Main Content
 - a. Modify <h2> to “Music at JavaJam”
 - b. Delete the Home page content unordered list and contact information.
 - c. Modify the content:
 - Use paragraph to write the following text (hint: use the special character ’ for the apostrophe character):

The first Friday night each month at JavaJam is a special night. Join us from 8 pm to 11 pm for some music you won't want to miss!

January Music Performance

- Configure an h4 element with the following text: January
- Code and opening paragraph tag. Assign the paragraph to the class name details.
- Configure the melaniethumb.jpg as an image link to melanie.jpg. Code appropriate attributes on the tag.
- Configure the following text within the paragraph after the image:
Melanie Morris entertains with her melodic folk style.

February Music Performance

- Configure an h4 element with the following text: February
- Code and opening paragraph tag. Assign the paragraph to the class name details.
- Configure the gregthumb.jpg as an image link to greg.jpg. Code appropriate attributes on the tag.
- Configure the following text within the paragraph after the image:
Tahoe Greg is back from his tour. New songs. New stories.

3. Test the hyperlink from the music.html page to index.html. Test the hyperlink from the index.html page to music.html. If you links do not work, review your work, paying close attention to these details:
 - Verify that you saved the pages with the correct names in the correct folder.
 - Verify your spelling of the page names in the anchor tags.

Test again after you make changes.

Task 5: The Jobs page

Create the Music page shown in Figure 4.

Open the **index.html** page for the JavaJam website in a text editor. Select File > Save As, and save the file with the new name of **"jobs.html"** in the javajam folder. Now you are ready to edit the page.
